**Title : Traffic Management and Auto Scheduling System**  
Client : CNBC, IBN7, CNN IBN  
Architecture : Dot Net Framework (2.0).  
Language : C#  
Duration : 18 Months.  
Team Size : 5 Members  
Description : Traffic in News channels the booking of advertisement, Sponsorship and Promos for the program in the particular time band. This software entirely works on the methods in the web service and for the GUI level we use DEV express Component and entire software system is based on Criteria, action and roles defined for the login person. This system is multi user system and works on the smart client technology  
Initially the sales person makes Deal with advertising company; this is then verified by the traffic coordinator. Once the deal is verified, Sales person can book number of spots in the particular time band said by the agency. Once the booking is done. Traffic coordinator schedules the spots booked by advertiser through your module of auto scheduling. Auto scheduling takes Break chart of the day and drops spots booked by agency automatically. Once the auto scheduling is done it is saved and log for the day is send to MCR to schedule the break advertisement .Once particular is gone on-air it comes to the billing section. Billing automatically generates the bill of the particular agency on the monthly basis. Invoice generations and other financial reporting are done by using crystal report.  
Role : Analysis, Software Developer / Programmer

**Title : iNews Download and Upload**
