- Can work under pressure.
- Can effectively work as team member or as an individual.

Project # 1:

Project Name:	**BASF MAGLIS**
Environment:	HTML5, Bootstrap css, Jquery, Node js, Backbone js, Marionette js, D3js(Graph), Dimple js, OpenLayers & Gmap API.

Project Description:

MAGLIS is part of BASF's Market Smarter, Grow Smarter and live Smarter strategy to educated growers with help of multimedia empower sales personnel to tailor recommendation for season and help growers to connect together. MAGLIS is multi-device, multilingual, offline first solution based on SAP mobile Platform(SMP).

Roles and Responsibilities:

- ➢ Working and coordinating as a Sr. System Engineer within a module with the team of 5.
- ➢ My responsibilities is requirement gathering from the USE case and LFW documents provided by my tech-lead and implement that information into business logic using JavaScript.
- ➢ Also Responsible for creating RESTfull API using Node js and mongoDB.
- ➢ Also assisting other team member to solve his issues.
- ➢ Playing an active role in communicating with the team and give new ideas required for the enhancement of the project.

Project # 2:

Project Name:	**PdSurf (A chrome extension)**
Environment:	HTML5, Node js, Socket.io, Angular and core JavaScript. Bootstrap css, D3.js
Node modules:	Passport, Nodemon, toast.
URL:	http://pdsurf.com/

Project Description:

PDsurF is a free PDF viewer for your browser that allows you to seamlessly manage online and offline PDF documents. It keeps a smart and limitless history of all PDF documents that you view, and allows you to access them on all of your computers. Additionally, it allows you to add highlights and annotations to viewed PDF documents right in your browser, without storing any of the documents on your computer. Except that it has many more functionalities like pdf file universally, manually custom tagging, real time highlight text, annotations, group chatting and pdf sharing.

Roles and Responsibilities:

- ➢ Working and coordinating as a developer with the team of 3 developers.
- ➢ My responsibilities was to implement login functionality using a JavaScript passport module.
- ➢ Also Responsible for UI Design of Navigation Components like Login section, Sharing section, chat section, Highlighter and drag and drop annotation section box Using HTML5/Bootstrap CSS.
- ➢ Taking the requirement to the client and converting into business logic.
- ➢ Also assisting other team member to solve his issues.
- ➢ Playing an active role in communicating with the team and give new ideas required for the enhancement of the project.

Project # 3:

Project Name:	**MultiVision**
Environment:	HTML5,MongoDB, Express js framework, Angular js, Node js (MEAN Stack) Bootstrap css,
Node modules:	Mongoose, Passport , Grunt, Nodemon, toastr, Karma, mocha.

URL: https://multivision-dev.herokuapp.com/

Project Description:

This is an online tutorials website in which users can free signup and download the study materials related to IT/Programming courses like e-books, Videos tutorials. I have worked on this app from scratch. I have created whole design using the jade templating engine along with the bootstrap css and Angular js. I have developed login system by using the passport node module. Toastr as client side notification (during successful sign in and sign out). And used mongoose node module to create users and course schema model and as a database onnectivity middleware to mongoLab (a ramote mongoDB database provider).

Roles and Responsibilities:

➢ Working and coordinating as a developer.
➢ My responsibilities was to work independently for a dedicated client and implement all the Functionalities using the Mean stack and supported node modules.
➢ Also Responsible for UI Design and functionality of whole project using HTML5, Bootstrap CSS, Angular js, node js and creating database collection schemas using MongoDB.
➢ Development, testing of the application, detecting the bugs and fixing them.
➢ Taking the requirement to the client and converting into business logic.

Project # 4

Project Name:	**roux academy meetups**
Environment:	HTML5, Express js framework, Angular js, Node js, Bootstrap css

Node modules:	Express, Jade, Grunt, Nodemon, Karma, mocha.
Project Url :	https://rouxmeetups.herokuapp.com/

Project Description:

This site is developed for roux-academy, a US Based academic organization. The Roux Academy gets thousands of submissions every year for artists interesting in participating in the CAC exhibits, and selects approximately 200 distinct pieces of contemporary art for display in their collective exhibit.

Roles and Responsibilities:

➢ Working and coordinating as a developer.
➢ Also Responsible for UI Design and functionality of whole project using HTML5, Bootstrap CSS, Angular js, node js and creating database collection schemas using MongoDB.
➢ Development, testing of the application, detecting the bugs and fixing them.
➢ Managing nearly all the modules of the project.

Project # 5

Project Name:	**Battleplan**
Environment:	Zend 1.8, Mysql5.0. Jquery

Project Description:

This site is developed for **The Valkyrie Consulting Group, LLC**, a US Based company [http://www.valkyrieconsultinggroup.com]. Battleplan is a business application which is migrated from an excel based tool (BATTLEPLAN-OM) to a web based application with the existing functionality and improvements. This web based application has user management section which allows creating different users having different access levels. The users can then create an "OPPORTUNITY" for their client which will help the client prepare his business strategy and also understand his strengths and weakness from over all survey by comparing his strengths and weaknesses with his competitor's. Also it users who can only view the "OPPORTUNITY" can comment on every page to give his inputs or suggestion for the particular page.

Battleplan is a business application which is accessible to only the authorize users and no unknown user has a direct access to the application.

Roles and Responsibilities:

➤ Working and coordinating as a developer with the team.
➤ Development, testing of the application, detecting the bugs and fixing them.
➤ Also Responsible for Analysis, Design and Development of Database.
➤ Managing nearly all the modules of the project.
➤ Also assisting other team member to solve their issues.
➤ Playing an active role in communicating with the team and give new ideas required for the enhancement of the project.

Project # 6:

Project Name: **Onlineguarding**
Environment: CodeIgniter, Jquery, Mysql, D3.js

Project URL: http://www.onlineguarding.at/

Project Description:

This is an online petrolling system which is providing the reporting data of guards.

Guard is sending the patrolling data through a device that is magcell device. Application is able to get that data and converting that data into the meaningfull report. This application has the capability to send sms to supervisor of sites in case of any panic or emegency.

Roles and Responsibilities:

➤ Working and coordinating as a developer.
➤ Development, testing of the application, detecting the bugs and fixing them.
➤ Also Responsible for Analysis and Design.
