* Involve in Interaction with client meeting to have a better understanding of the requirement and feedback

* Liaising with developers to swiftly resolve faults.

* Involve in preparing and executing Manual Test Cases in Android and Iphone app

PROJECT – 2

Title	**ProAdvisor**
Role	**Test Engineer(Manual Testing)**
Environment	**Php/Android , ios**
Reporting Tool	Jira
Team Size	3
Synopsis	ProAdvisor is Australia's first online marketplace that features all types of professional advisers. Our website makes it easier for Australians to find, compare and hire a quality professional to assist them in financial, tax, accounting or legal matters. Clients no longer need to spend time and resources searching through firm websites, directories and phone books. Through these avenues, information about the firm and the adviser is not very transparent and the responsibility of finding this information is ultimately put back on the client. Choosing a professional adviser based on a personal recommendation from colleagues, family or

friends may not result in a "best fit" for both parties. All of this can be very frustrating, time consuming, and expensive especially if the professional assistance is required urgently

Responsibilities:

* Understood the requirements and software requirement specifications about the application
* Logging Bugs & Generating bug reports using Jira
* . Developed test plan, test strategy and test cases
* Done validation, sanity testing and all of all integration testing
* Involve in Interaction with client meeting to have a better understanding of their requirement & feedback
* Interact with developers to resolve faults.
* Involve in Searching Records from DB MY SQL 5.0
* Involved in mapping Test Scenario with Test cases for New Module and modified existing changes

PROJECT – 1

Title	**HelpChain**
Role	**Test Engineer(Manual Testing)**
Environment	**Core php/Android , ios**
Reporting Tool	Jira
